

Refrigerated container for the transport of chilled and frozen products at a controlled temperature

- Available in versions:
 - AF: temperature adjustment range: from 0°C to +10°C;
 - AFH: with heating kit and temperature adjustment range: from 0°C to +40°.
- Equipped with twelve guides with constant pitch (4 cm), it allows to transport different combinations with GN1 / 1 pans and submultiples.
- Easy to transport by car and easy to handle thanks to the dimensions and weight content.
- Cooling unit is triggered when external temperature is higher than the temperature set with the programmable digital thermostat. This allows to maintain a constant temperature even in case of very high external temperatures.
- In the AFH versions, the heating unit is triggered when external temperature is lower than the temperature set with the programmable digital thermostat. This allows to maintain a constant temperature even in case of very low external temperatures.
- Total compliance with the cold chain at all stages of transport.
- It can be transported using conventional vehicles: it allows to simultaneously transport chilled, frozen and ambient temperature products using a single non-insulated vehicle.
- Equipped with a low consumption fridge unit.
- Dual power source: during transport can be connected to the battery (or auxiliary battery) of the vehicle and, at the destination, can be connected to mains power.
- Manufactured using the rotational moulding technology: mono-block container and door (free of sharp edges, joints and welds).
- Fully recyclable at the end of the operating life.

MANUFACTURING MATERIALS

Polyethylene	inner and outer walls of the container and lid; suitable for food contact	Polyurethane	insulating material between the walls of the container and of the lid; free of CFC and HCFC
Silicone	gasket	Polyamide reinforced with fiberglass	hinges, clasp
Galvanized steel	Cooling unit frame	Stainless steel	grip handles
