

## STANDBY MUST ALWAYS BE PLUGGED IN FOR PRECHILLING

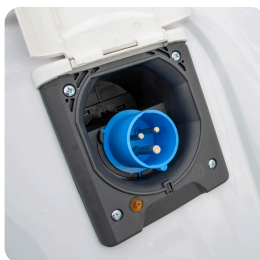

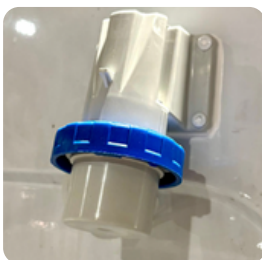

Pre-chilling the vehicle should always be done with the Standby plugged in regardless of drive.

This is when the fridge unit has the highest power demand and can drain the battery.

The Victron Connect app displays the battery status and notifies you if charging is required. For more information, please click [here](#).

Standby Sockets

EV Charger

**STANDBY DOES NOT CHARGE THE EV BATTERY**  
**EV CHARGER DOES NOT CHARGE THE AUX BATTERIES**
